

GETTING PERFORMANCE CERTIFICATIONS ONLINE

Recently one of our customers that manufactures Hydrostatic Pressure Testing Equipment and had sent some of our pressure transmitters to an offshore facility without the Performance Certifications. The Standards body the American Petroleum Institute has strict specifications for calibration of sensors under API 6A section 7.2.2.3 stating that "Calibration intervals shall be a maximum of 3 months until recorded calibration history can be established by the manufacturer and new longer intervals (3 months maximum increment) established". Without the Performance Certificates the end user could not install the transmitters.

It was the weekend and critical that the units be installed when our customer remembered they had a login that allowed them to access our stored Performance Certificates thru our website just by inputting the S/N of the unit. This feature is even easier to use now with no login in needed by just going to the V-Commerce tab on our website www.viatran.com and selecting Performance Certificates. Our customer sent the certificates over to the end user and they were able to install them immediately. Please give us a call if you have any questions about this valuable resource.

Performance Certificate
Serial Number Search

In the search box below, enter the Viatran Serial Number and view the results

SERIAL #

Can't find your certificate or have questions on where to find your product's Serial Number?
